

"We've only been using it a WEEK, but I absolutely ADORE this stove!

I haven't heated a home with anything but an oil furnace and a thermostat since my childhood in Massachusetts with a wonderful Swedish coal stove. This house has NEVER been this toasty warm in my 7 years here, the hubby/ kids/pets are thrilled. It even heats the second floor if we open the door to the upstairs hallway, and we have not had heat up there in our bedrooms in YEARS (and it's a crappy cold February here in northwestern NJ, oh yay!).

Thank you!

Geralyn

Tool Kit, Touch-up Paint, Chimney Probe Thermometer, Magnetic Stove Thermometer, Shipping Crate And FREE Shipping
to a Business or Local Terminal

Unmatched Performance and Versatility

Multi-Fuel/Biomass Capacity

Burns Any Biomass Fuel: Not just 2 or 3 different fuels as with the other Multi-Fuel competition, or just one fuel, like all woodstoves. Biomass fuels include, wood, wood by products, corn husks and stalks, rice hulls, peanut shells, grass clippings, leaves, woodchips, wood scraps, sawdust, hay, grasses, and animal waste. Biomass is a renewable resource, thus protecting the environment. The Sedore has always been a Multi-Fuel/Biomass stove, and has developed and improved this technology, all along. The Sedore is not finicky about the moisture content, or if the fuel is clean from debris, as with other stoves, where only dried, cleaned, sized fuels can be used. All fuels can be mixed, or burned alone, which makes the Sedore unique, and in a class of its own.

Unique features of the Sedore 3000, Multi-Fuel/Biomass Stove

Heat Output Efficiency: At 88% efficiency, it's in the upper class. Delivering a maximum output of 150,000 BTU's convectively, and 75,000 BTU's of water heating capability, the Sedore is the top heat producing stove available in its class, but it's also the only stove in its class, making it difficult to compare. No other stand alone woodstove comes close, the best being 120,000 BTU's, but an efficiency rating of 78% and a cost of \$4,500.00, and only burns seasoned hardwood.

Clean Burning Technology: Patented clean burning technology achieved without use of electrical components, or fans, so you achieve clean burning with a wide variety of differing fuels, using no electricity.

Extended Burn Times: 8-12 hour long burns times consistently, and always holds a fire through the night, no babysitting, or interrupted sleep.

Top Loading: Top loading provides, easier fuel loading, and topping off. This maximizes the use of its large firebox because it can be filled completely. No stooping or bending, and no hot embers falling out of the firebox.

Simplicity of Operation: The air intake is the only adjustable control on the stove, so you simply adjust it for the desired amount of heat, from the fuel being used.

Durability of Construction: Constructed meticulously, with high grade, and stainless steel, to insure lasting many lifetimes .

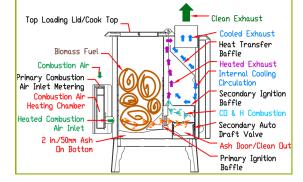

Non Electrical: No electricity required for the stove to operate, no electrical or automatic controls involved, adding to its simplicity, and makes it ideal for <u>living off</u> the grid.

Simplicity of Ash Removal: Due to efficient combustion, little ash is produced, leaving less ash to remove. Ashes are removed simply, while the stove is in operation

Cooking, and Hot Water: The ability to heat your building, cook, and heat hot water, all done with no electricity.

Water heating Solutions: Sedore's Thermal Transfer Coils are designed and installed specifically for your domestic hot water or hydronic heating requirements.

Made in the USA: All parts and labor are Made in the USA. Sedore USA LLC is a small business, where "Quality and Customer Service are still a priority".
